

Segment Overview

Cluster 1 is our largest and highest-risk customer segment, containing 15,315 total customers. It carries a critical risk category designation with a severe churn rate of 64.38% (9,860 churned vs. 5,455 retained customers).

Churn Probability

- **Total Customers in Segment:** 15,315
- **Churned Customers:** 9,860
- **Churn Rate:** 64.38%
- **Stay Rate:** 35.62%
- **Root Cause Drivers:** Customers who churned had a significantly higher average churn risk score (1.0 vs 0.0 for stayers), fewer points in their wallet (638.79 vs 725.45), slightly higher age (26.09 vs 23.18 years), lower platform engagement (average time spent 152.34 vs 190.82 minutes), and a stark lack of membership (31.05% of churners had "No Membership" compared to just 1.52% of stayers).

Risk Level

This is our most critical segment due to its massive volume of lost customers (9,860) and an alarming 64.38% churn rate. Immediate aggressive intervention is required for customers showing a high churn risk score, lacking active memberships, and exhibiting declining wallet points or engagement time.

Suggested Retention Actions

1. Deploy an immediate automated VIP outreach campaign targeting all customers in Cluster 1 who currently hold "No Membership" to offer heavily discounted or complimentary introductory tiers.
2. Implement an aggressive point-multiplier promotion or wallet-boost credit to bridge the gap for customers with lower points in their wallet (638.79 average).
3. Trigger urgent re-engagement push notifications and emails when a user's session time or daily activity dips below the segment average of 152 minutes.
4. Establish a dedicated high-priority customer success rescue team to personally call and assist users identified by the churn risk score model.
5. Create exclusive, time-sensitive flash sales and limited-time rewards specifically tailored to younger demographics (around age 26) within this cluster.
6. Introduce an exit-intent survey popup offering instant service credits or bespoke discounts the moment high-risk behavior is detected on the platform.
7. Launch a targeted win-back email sequence within 24 hours of inactivity featuring personalized recommendations and high-value incentives.
8. Revise onboarding or re-activation workflows to immediately showcase unused wallet points and how to redeem them.
9. Partner with product teams to surface high-engagement features directly to low-activity users to drive up average time spent.
10. Monitor daily redemption and engagement metrics for this specific cohort to measure the real-time effectiveness of aggressive retention interventions.
