

Segment Overview

- **Cluster ID:** 1
- **Risk Category:** Risky (Highest Risk Segment)
- **Total Customers:** 15,315
- **Churned Customers:** 9,860
- **Stayed Customers:** 5,455

Churn Probability

- **Churn Rate:** 64.38%
- **Stay Rate:** 35.62%

Root Causes (with real numbers)

- **Churn Risk Score:** Churned customers have an average score of 1, compared to 0 for those who stayed (effect size: 2.088).
- **Points in Wallet:** Churned customers hold fewer loyalty points on average (638.79) compared to those who stayed (725.45).
- **Age:** Churned customers in this segment tend to be slightly older on average (26.09 years) than those who stayed (23.18 years).
- **Membership Category:** A staggering 31.05% of churned customers have *No Membership*, compared to just 1.52% of customers who stayed.
- **Engagement / Time Spent:** Churned customers spend significantly less time on the platform (152.34 minutes/seconds) than those who stayed (190.82).

Suggested Retention Actions

1. **Targeted Membership Incentives:** Since over 31% of churners lack a membership (vs. only 1.5% of stayers), immediately offer discounted or complimentary trial memberships to convert non-members into active members.
2. **Wallet Points Top-Up & Redemption Drive:** Address the lower wallet balances (638.79 vs. 725.45 points) by issuing bonus loyalty points or exclusive rewards that encourage immediate point redemption.
3. **Re-engagement Campaigns for Low Engagement Users:** Combat the lower time spent on the platform (152.34 vs. 190.82) with personalized product recommendations, push notifications, and gamified incentives to drive session frequency and duration.
4. **Early Warning Interventions:** Use the churn_risk_score flag to automatically trigger automated VIP customer success outreach the moment a user exhibits elevated risk indicators.
